```python
In [1]:  inp = input('floor?')
         x = int(inp) + 1
         print('floor', x)
```

```
floor?0
floor 1
```

```python
In [2]:  hrs=input("Enter Hour:")
         rate=input("Eenter Rate per Hour:")
         pay=float(hrs)*float(rate)
         print("Pay:", pay)
```

```
Enter Hour:32
Eenter Rate per Hour:2.67
Pay: 85.44
```

```
